NG Kütahya Seramik: Innovation and Technology in Design

Founded in 1989, **NG Kütahya Seramik** is among the global players of the porcelain ceramic industry, with 37 years of expertise, more than 400,000 m² of enclosed production area, and an annual production capacity of 85 million m² within a single integrated manufacturing complex. With its innovation, design and sustainability-driven approach, the company continues to evolve and further strengthens its solid position in international markets.

NG Kütahya Seramik is part of an entrepreneurial heritage rooted in more than sixty years of experience and in a culture built around manufacturing expertise, innovation and a long-term vision. A legacy developed over time by the Güral family through activities spanning industry, porcelain and hospitality, all united by a constant commitment to quality, design and service excellence. Expanding through a wide range of sizes, surfaces, and design alternatives, the product portfolio delivers modern and flexible solutions for architectural projects. Supported by a network of over 300 business partners across Türkiye and an export reach spanning more than 80 countries, the brand continues to enhance its global footprint.

Our environmentally friendly products, certified with EPD and GREENGUARD, are complemented by NSF-certified solutions developed in line with our commitment to hygiene and human health.

Today, NG Kütahya Seramik is preferred in projects across both Türkiye and international markets, positioning the brand as one of the strong global representatives of the porcelain ceramic industry.

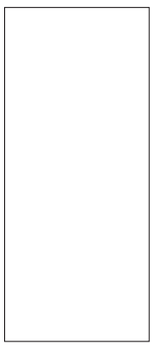

We Produce for a Sustainable Future

Guided by our respect for the environment and the value we place on people, we approach sustainability through a holistic perspective encompassing environmental, social, and economic dimensions, and integrate our responsibility toward the future into all our business processes.

Within the scope of our sustainable energy investments, we support our production with our own resources through rooftop Solar Power Plant (SPP) facilities with a total installed capacity of 28 MW, while reducing the environmental impact arising from our energy consumption. Through these investments, we aim to significantly lower our carbon footprint and continue our efforts without interruption toward a cleaner future.
